Code forces question :

Codeforces:1399C

The screenshot shows the Codeforces website with the problem 1399C, "Boats Competition", marked as "Accepted". The user's name is "srijakothakondal1". The Java code is as follows:

```
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int t = sc.nextInt();

        while (t-- > 0) {
            int n = sc.nextInt();

            int[] freq = new int[n + 1];

            for (int i = 0; i < n; i++) {
                int u = sc.nextInt();
                freq[u]++;
            }

            int ans = 0;

            for (int sum = 2; sum <= 1 + n; sum++) {
                int teams = 0;

                for (int i = 1; i <= n; i++) {
                    int j = sum - i;

                    if (j < 1 || j > n) {
                        continue;
                    }

                    if (i == j) {
                        teams += freq[i] / 2;
                    } else if (i < j) {
                        teams += Math.min(freq[i], freq[j]);
                    }
                }

                ans = Math.max(ans, teams);
            }

            System.out.println(ans);
        }

        sc.close();
    }
}
```

The screenshot shows the "Judgement Protocol" section of the Codeforces problem page. It displays the test case details and the input/output for the accepted solution.

Test: #1, time: 93 ms, memory: 0 KB, exit code: 0, checker exit code: 0, verdict: OK

Input:

```
4
1 1 1 1 1
1 1 1 1 1
1 1 1 1 1
1 1 1 1 1
```

Output:

```
4
4
4
4
4
```
